

## Reality Check Phase – Step 1

This example is on outcomes of the user testing of the first prototype made in the Design phase. This is an example from running a UCD Sprint for making the ucdsprint.com website.

Examples:

- Answers from the questions
- A photo of the Post-it notes

Answers to the interview questions:

| Questions   | User 1   | User 2  | User 3  | User 4   | User 5  |
|---|--|---|---|--|---|
| 1. First, can you tell me about your background, education, and current situation (job, studies, etc.)? | Final semester in business and administration  | 2end semester CS  | 2end year CS and financial engineering                                | 2end semester CS                                     | 2end yr business                              |
| 2. How much are you online? Which tools do you use, our phone, tablet, laptop, etc.?                    | Google, YouTube, Investopedia, Free University   | Google, stack overflow, chegg – googles and finds site from there | Google and finds from there, stack overflow                           | Google, YouTube                                      | Data Camp, wiki                               |
| 3. When you are studying what software do you use mostly?   | Materials in Canvas in GHOSH helpful   | Uses slides   | Slides – adds notes to the slides. Doesn't check validity of sources. | Slides and echo videos                               | Used slides and youtube videos - not the book |
| 4. How is the experience of using these tools?  | Dislikes – when info not detailed enough. Likes – when they find details that they did not get in the course | Good idea to make this site                                       | Dislikes when info is not specific                                    | Does not read much on the web, since he has Dislexia | Likes interactive sites                       |
